01 PROFILE

Experienced Software Developer, bringing expertise in design, development and maintenance of software systems/products.

Adept in various software applications tech stacks and delivery methodologies

02 EMPLOYMENT HISTORY

07/2024 — present

Full-stack engineer at Nexgen Cloud

remote

Working on providing innovative, robust and clean cloud services while trying to position the company as a leader in the cloud services-for-AI and GPU-as-a-service spaces. My daily work involves working with all ranges of positions and providing solutions for customers on the API and UI level.

Some parts of the product are actually API-first, hence making the technical delivery even more important. Part of my goal is to also help establish pipelines and processes within a newly-formed company. We use Python (Flask), Next.js, Docker, MySQL, etc. to build the needed services, while leveraging Openstack solutions.

10/2017 — 07/2024

Software Developer at Ritech Solutions

Tirana, Albania

As the 11th employee in a company that grew to over 300, I've developed diverse software solutions across various industries and company sizes. My journey includes a pioneering tool for a legal services startup (DiscoveryMaster), a hybrid-office and IoT app (ComfyApp/Siemens), maintaining and developing CRMs for a major security firm (TrackForce Valiant), and contributing to an innovative LLM startup. My skill set spans from the TypeScript/JavaScript world, to Python-based data-rich applications, fast API building with Node or .NET, and deploying robust solutions using Docker, AWS, or Azure.

03/2022 — 01/2024

Senior Frontend Developer at DealCircle GmbH.

Remote + Hamburg, Germany

As a senior frontend developer, I helped build effective, pragmatic solutions using React, TypeScript, Tailwind, and others. Tackled complex business logic, significantly contributing to the product's evolution to being an 'AI-centered' M&A solution. My focus has been on crafting interfaces that are not only responsive but also intuitive, offering a UX akin to native applications like MS Excel or Airtable, while handling high-frequency updates and complex

state management.

08/2020 — 02/2022

Frontend Team Lead at Seraphic Security

Tel Aviv, Israel

Delivered software quickly and in a qualitative manner, which was pivotal for launching our product suite that not only prioritizes user privacy and security, but also maintains transparent security solutions, both in-cloud and on-premise. The challenge of publishing three distinct web-based products, including a browser extension with common business logic and shared state, was met with innovative solutions, such as robust multi-tier authentication, serverless functions, etc, contributing to a seamless UX across all platforms.

08/2019 — 05/2020

Frontend Team Lead at StoreWise

remote

In the evolving domain of decentralized object-storage, I contributed to the development of serverless applications using React, TypeScript, AWS and the SIA dApp suite. While the project ultimately didn't succeed, it provided valuable insights and a rewarding experience working with fully remote teams and exploring the decentralized web.

02/2017 — 09/2017

Software developer at Bump / MiQ Ltd.

Geneva

In a startup focused on enhancing the music playlist experience, I played a key role in expanding an iOS app into a Vue-based (and later vanilla JS) web platform as part of a fully remote team. My efforts were concentrated on seamless integration with the Spotify API, utilizing Sockets for real-time interactions, and employing server-side rendering for an optimized web presence. The whole team was remote.
